

VAC SOFTTECK
Goddess of Communications

Convergence in Communication to **cut cost** & **Increase Efficiency**

An IP PBX (Internet Protocol Private Branch Exchange) is a type of private branch exchange (PBX) phone system that connects telephone extensions to the public switched telephone network (PSTN) and provides internal communication for a business or organization via Internet Protocol (IP) networks. It uses Voice over Internet Protocol (VoIP) technology for making and receiving calls, transmitting voice data over the internet or internal IP network rather than traditional phone lines.

Connectivity is assured

PBX Dashboard Login

VAC IPPBX is private telephone switching system within an enterprise to converge data and voice networks. This means that internet access, VOIP communications and traditional telephone communications are all possible using a single line. This provides flexibility as an enterprise grows & can also reduce long term operation and maintenance costs.

Admin users can typically:

1. Log in using their username and password.
2. View and manage user details such as:
 - User accounts
 - Call logs
 - Active connections
3. Monitor activity on the PBX system, ensuring smooth communication.

Long Duration Calls Report

SI NO.	CALDATE	SRC	DST	DISPOSITION	DURATION	RECORDING
No Long Calls Found						

The dashboard provides a visual representation of extension-wise call performance for both outgoing and incoming calls. The graphs reveal a significant drop in both call types across extensions, suggesting low call activity for most extensions. Additionally, the Long Duration Calls Report shows no recorded long calls, indicating minimal extended conversations. This dashboard serves as a centralized tool for monitoring call trends and performance in a local PBX system.

Scalability

VAC IP PBX systems offer numerous advantages over traditional PBX systems, including cost savings, scalability, flexibility, and advanced features such as voicemail, auto-attendant, call forwarding, conference calling, and more. They are highly suitable for businesses of all sizes, from small units to large enterprises, looking to modernize their communication infrastructure.

VAC IP PBX systems come with a wide range of features designed to enhance communication within organizations. Here are some common features you'll find in an IP PBX system:

Calling: VAC IPPBX Software enables you to make and receive calls over the internet or internal IP network, reducing costs associated with traditional phone lines.

Extension Dialing: Users can dial internal extensions to reach colleagues within the organization easily. Our IPPBX enable users to have IP Phones on LAN network, analog phones with gateway interface and android phones with wifi.

Interactive Voice Response (IVR): VAC IPPBX greets and directs callers, thru an automated voice menu system, to the appropriate department or extension. Greeting message can be customized.

Voicemail: Our software allows you to record and manage voicemail messages, accessible through phones or web interfaces.

Call Transfer: You can transfer calls to other extensions or external numbers seamlessly.

Call Forwarding: VAC IPPBX helps you to forward calls to other extensions or external numbers based on predefined conditions or user preferences.

Call Recording: Our IPPBX software gives you the flexibility to record incoming or outgoing calls for quality assurance, training, or compliance purposes.

Conference : VAC IPPBX helps you to create multi conference bridges with internal and external participants. Such conferences can also be recorded and shared with other stakeholders who could not participate in the conference.

Unified Messaging: You can access voicemail, email, and fax messages from a single interface in our VAC IPPBX.

Call Queuing: Manage incoming calls during peak times by placing them in a queue and playing customizable messages or music while waiting.

Call Monitoring and Barging: Supervisors can monitor live calls and intervene if necessary, or join the call silently for training or assistance.

Integration with CRM and other Business Applications: Integration with customer relationship management (CRM) systems or other business applications for improved productivity and customer service.

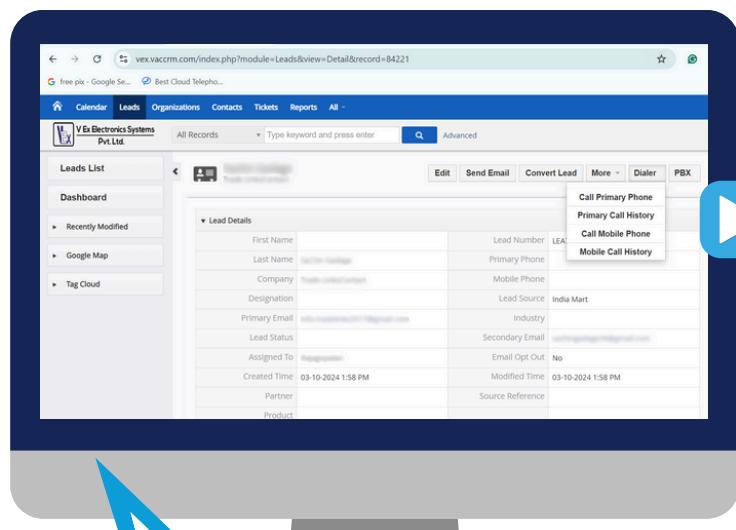

Security Features: Encryption, access control, and authentication mechanisms to ensure the security of communications.

Scalability: Easily add or remove extensions and features as the organization grows or changes.

Mobility: Support for mobile devices, allowing employees to stay connected even when away from the office.

Call Analytics and Reporting: Generate reports on call volume, duration, and other metrics for performance evaluation and optimization.

Interconnect your existing EPABX for analog extensions. These features can vary depending on the specific IP PBX system and the needs of the organization. Many IP PBX systems offer customization options to tailor the features to the unique requirements of each business.
